That DeLorean is back

Made famous by “Back to the Future,”
the world’s most famous time machine, the DeLorean.
A striking metal body, futuristic gull-wing doors.
That DeLorean is back as a 1/8 big-scale model…

A real car: the DMC-12

The DeLorean time machine in “Back to the Future” is a modified production car. It was based on the “DMC-12,” known as the “DeLorean”: the only car the DeLorean Motor Company ever made. The company went bankrupt in 1982, and only about 8,500 were built. Its rarity, its striking design and the film have given it many devoted fans to this day.

The series is complete in 130 issues

Lights everywhere

Lights built in all over make the time machine glow

Its many lights stand out: brake lamps worked by the pedal, lamps lit as the doors open and close, lights inside and out.

A body with a soft sheen

Main parts in die-cast alloy, with a hairline finish

A die-cast alloy body with its hairline finish reproduced, giving off a soft sheen all its own.

Go deeper with the magazine

The magazine explains how to build the model, and is packed with ways to know the film better: stories from the shoot, behind the scenes and more.

Into the film's world, in

The magazine covers the stories behind the shoot and the scenes, and how the DeLorean came to be: packed with ways to know the film and the DeLorean better.

Making the Movie

How was "Back to the Future" made? We cover the meeting of the director and the screenwriter that started it all, how the script changed, stories from the casting and more.

Packed with columns on "Back to the Future": trivia that adds to what you know about the film.

With the director's and the screenwriter's own recollections: in their words you can feel what making the film was like.

Behind the Scene

How was the DeLorean, the world's most famous time machine, created? Through the accounts of the designers and concept artists who worked on it, we trace its development in detail.

Illustrations and storyboards by the designers: packed with rare artwork drawn during production.

How was it designed and refined? We follow the DeLorean's birth step by step.

n depth

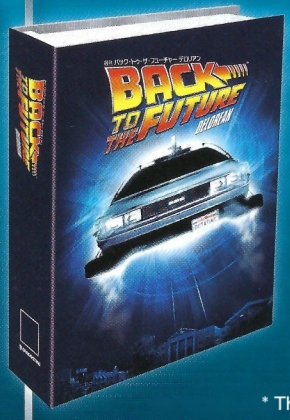

Column of the Future

The actors and actresses who played each role, starting with the hero, and important landmarks from the film: one in each issue.

Each issue also has trivia about the actors, actresses and landmarks.

Gifts for every subscriber!

1. Special binder for the series

* The binder design may change.

2. Actual-size replica DeLorean number plate

For details, see the bound-in subscription form.

"Back to the Future"

A sci-fi comedy action film in which the hero, Marty McFly (Michael J. Fox), and Dr. Emmett Brown (known as Doc; Christopher Lloyd) travel to the past and the future in the DeLorean time machine. On its release in 1985 it was a smash hit that started a craze in America. The sequels followed: Part II in 1989 and Part III in 1990. Directed by Robert Zemeckis, written by Bob Gale, with Steven Spielberg as executive producer. Among its many charms are the set-ups and parodies woven all through the story: a masterpiece of sci-fi adventure you never tire of, however often you watch it.

The story through the DeLorean

Part I

[Enter the DeLorean: time travel to 1955]

After the time-travel experiment, terrorists attack. Doc is killed, and Marty ends up in 1955… In the past, Marty goes to Doc to get back to the future. Caught up in his parents' romance, he starts a slapstick run of one trouble after another.

Fitted with the "reactor," "time circuits," "flux capacitor" and the other gear time travel needs!

[Safely back in 1985: enter the "future" DeLorean]

Using the lightning strike on the clock tower, Marty travels back to 1985. In the last scene, the DeLorean that appears has come from 2015…

Fitted with "Mr. Fusion," which turns garbage into power, and the "hover conversion" that lets it fly!

"Mr. Fusion" breaks garbage down to molecules for power.

Part II

[The DeLorean in 2015]

Marty heads to 2015 in the "future" DeLorean, to save his son from getting mixed up in a crime.

[Back to 1985: a world ruled by Biff]

Having saved his son, Marty returns to 1985. But it is a nightmare world ruled by Biff Tannen.

[To 1955, to set the world right]

History changed because of a sports almanac from the future, which Biff gave his younger self. Back in 1955, Marty's fight over the almanac begins.

[The DeLorean, struck by lightning, to 1885]

Marty and Doc get the almanac back from Biff. But the jolt of a lightning strike sends the DeLorean, with Doc aboard, slipping back to 1885. It is lost…

The time circuits and the hover conversion break down

Part III

[The DeLorean found: to 1885]

Marty, stuck in 1955, gets a letter from Doc. He finds the DeLorean hidden in a mine and heads for 1885.

The time circuits repaired; the worn tires replaced

[The DeLorean's last time travel]

Part III is set mostly in frontier-era 1885: a showdown with Tannen, Doc's romance… After saving Doc, Marty returns to 1985 in the DeLorean, pushed by a steam locomotive.

Leaking fuel leaves it unable to run. Its wheels are swapped for rail wheels so a locomotive can push it

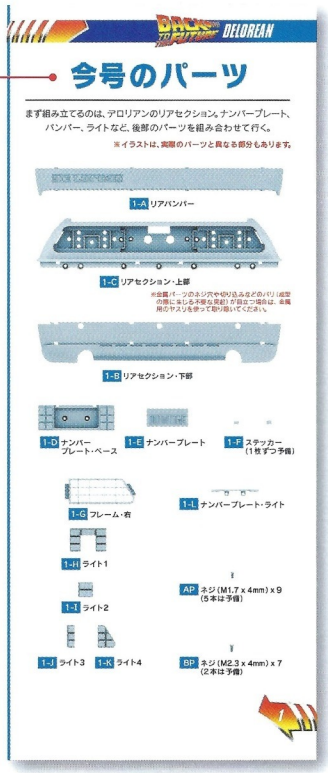

Easy to build, with clear diagrams

Let's build that DeLorean!

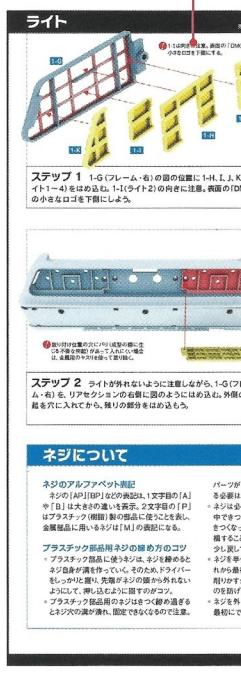

Each issue explains in detailed diagrams how to build the parts that come with it. Check the parts, then start building that DeLorean.

Easy mistakes and cautions get ! this mark. Mind which way parts face and fit.

Each issue lists its parts. Check nothing is missing before you build.

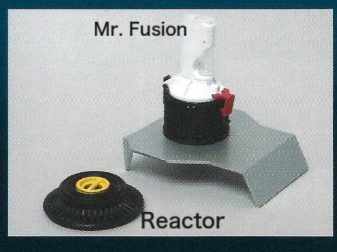

Each issue also has a column on its parts. What do the letters on the number plate mean?

You can also finish it as the "future" DeLorean

In Part I's last scene, the DeLorean arrives from the future. By adding "Mr. Fusion," which turns garbage into power, and more, you can also finish yours as the "future" DeLorean.

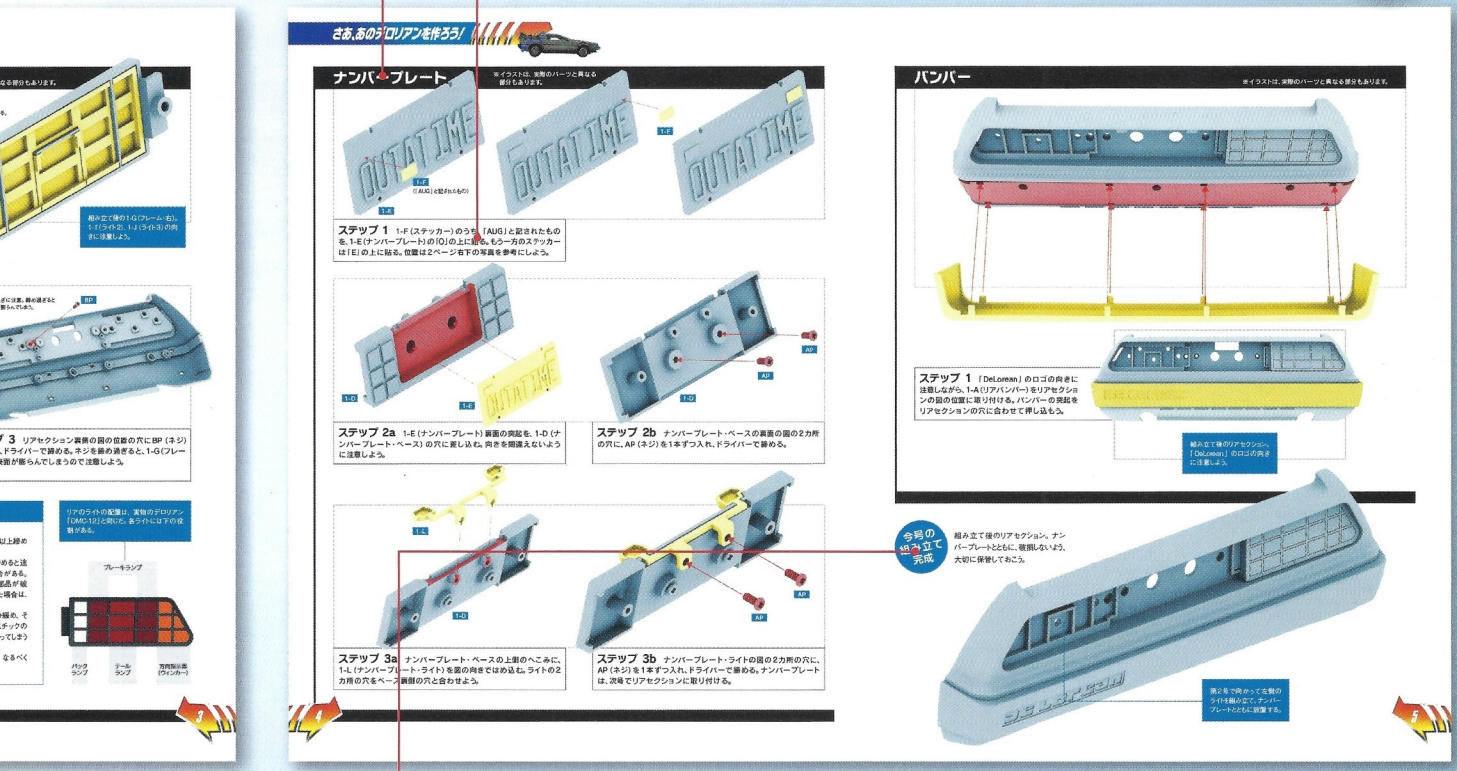

The 1/8 DeLorean's main parts are die-cast alloy, with plastic parts and more. It builds easily with the supplied screwdriver. How to build each issue's parts is explained clearly with diagrams.

Each part of the car is covered in turn. Build it step by step.

How the parts fit together is explained carefully, step by step.

A picture shows the result. Check once more that it is built correctly.

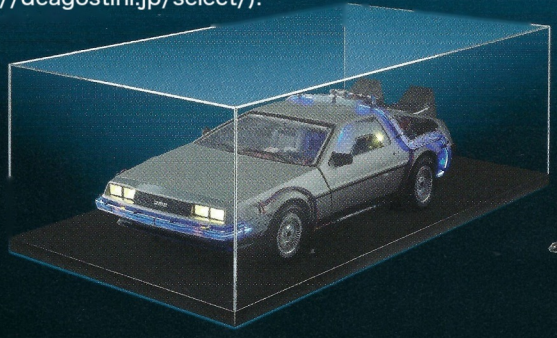

All you need is the supplied screwdriver!

Parts are fixed by pressing them together or with screws. The supplied screwdriver does all the screws! From time to time we'll suggest handy tools too, such as instant glue for reinforcement.

A dedicated display stand is planned

A dedicated display case to show off your finished DeLorean is planned. For details, see the DeAgostini Select mail-order flyer that comes with the magazine later in the series, or the website (http://deagostini.jp/select/).
